The market is flooded with such clones, but here at LoopFrog, we are dedicated to provide the best video loops available online. So, if you are looking for a loop pack, then you have come to the right place. Below is a list of best video loops that are easy to work with, affordable, and can be used for your next video project. The present invention relates to a flow meter, and more particularly to a magnetic flow meter. One conventional magnetic flow meter comprises a U-shaped stator and a rotor disposed within the stator. When the rotor rotates, a Hall effect device arranged on the rotor detects a magnetic field of the rotor

---

and generates a corresponding pulse signal. The rotor comprises a hole formed at the center thereof, and the rotor is coupled with a magnetic flow pipe. One end of the magnetic flow pipe has a first magnetic pole and the other end has a second magnetic

pole. The magnetic flow pipe has a first portion and a second portion. The rotor is inserted through the first portion of the magnetic flow pipe. The rotor is coupled with a casing. As the rotor rotates, the second magnetic pole of the rotor rotates within the magnetic field of the magnetic flow pipe. In the above magnetic flow meter, a single Hall effect device is used to detect the magnetic field of the rotor, thereby to measure the flow rate of the magnetic flow pipe.

1. Field of the Invention This invention relates to a dampening fluid control system and more particularly to a dampening fluid control system for providing a plurality of pressurized dampening fluids to a dampening fluid spray and/or fogging unit for use with an image forming device, such as a photocopier or printer.

2. Description of the Related Art In electrostatographic reproducing apparatus, including printers, facsimile machines, copiers, etc., a latent image charge pattern is formed on a charged image carrying member such as a photoconductive belt, and developed with a finely divided pigmented electroscopic marking material known as toner. The toner

image may then be transferred to a recording medium such as paper. After the toner image is transferred to the recording medium the image is fixed to the recording medium. Multi-component developer compositions are well known in the art, as shown in U.S. Pat. No. 4,560,635, and are used hereinafter to assist in the better understanding of the present invention. In two component development systems a mixture of toner 82157476af
